Funding Resources

As a service to our Partners, EPA's CHP Partnership provides regularly updated lists of state and federal incentives applicable to CHP and biomass/biogas projects, including financial incentives and favorable regulatory treatment. The CHP Partnership updates this information twice a month.

Funding Resources

- [Funding Database](#)
- [Monetizing Environmental Benefits](#)

CHP and biomass/biogas funding opportunities are offered by various entities throughout the country, many at the state and federal level. These opportunities take a variety of forms, including:

- Financial incentives, such as grants, tax incentives, low-interest loans, favorable partial load rates (e.g., standby rates), and tradable allowances.
- CHP or biomass project development can be expedited with regulatory treatment that removes unintended barriers such as standard interconnection requirements, net metering, and output-based regulations.

The Funding Database lists these and other incentives that might be applicable to your CHP project and organizes funding opportunities in two general categories: type of project and type of incentive.

Type of Project:

- [State and federal incentives applicable to CHP systems](#), such as direct financial incentives or favorable regulatory treatment.
- [State and federal incentives applicable to biomass/biogas-fueled CHP and distributed generation projects](#), including financial incentives and favorable regulatory treatment.

Type of Incentive:

- The [financial incentives page](#) includes grants, tax incentives, low-interest loans, favorable utility rates, tradable allowances, and renewable portfolio standards—all of which could help CHP project developers or end users locate additional funding for their CHP or biomass project.
- The [regulatory treatment page](#) lists regulations that remove unintended barriers to CHP or biomass project development and can include: standardized interconnection rules, net metering rules, or output-based regulations.
