

IN THE MATTER OF :

RENEWABLE ENERGY COMMUNITY FEED-IN TARRIFFS.

NSUARB-BRD.

Closing comments from JOHN H. REYNOLDS P.Eng. FOR QUETTA INC.

April 29th. 2011.

The Board will recall from the hearing how difficult it seems to ‘nail-down’ the appropriate level for capacity factors. If Nova Scotia is to become a leader in “green energy”, particularly wind energy, we have a need to build-up a data bank from the experience of the increasing number of wind projects. To this end we respectfully ask that the Board consider including in their order a call for some reporting on the results from the various wind farms. This will require standardization of definitions of terms and protocols in their determination.

We know that some of the developers will not want to ‘go public’ with their data.

The information could be filed with the Board in confidence.

The Board will need these data to have meaningful reviews of the rates paid.

These reviews have been contemplated during the course of the hearings.

All of which is respectfully submitted.

JohnH. Reynolds P.Eng.
