

NON-CONFIDENTIAL

1 **Request IR-1:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 6, lines 7-8.**

4
5 **NS Power states that “NS Power will have access to market-based clean energy forecast to**
6 **be priced in the \$50/MWh range.”**

7
8 **(a) Please provide sources and analyses to support this statement.**

9
10 **Response IR-1:**

11
12 **Please refer to NSUARB IR-1.**

NON-CONFIDENTIAL

1 **Request IR-2:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 6, lines 12-13.**

4
5 **NS Power states that “Distributed energy resources (DER) and non-regulated DSM are**
6 **curbing load growth organically, without the need for electricity incentives.”**

7
8 **Please provide specific sources and analyses to support this statement.**

9
10 **Response IR-2:**

11
12 Please refer to SBA IR-8 and NSUARB IR-12.

NON-CONFIDENTIAL

Request IR-3:

(a) Please provide annual residential rates for the last 10 years, broken out into fuel and non-fuel rate components.

(b) Please indicate which annual rate changes were driven by General Rate Applications, Base Cost of Fuel proceedings, changes to FAM AA/BA amounts, or any other causes.

Response IR-3:

(a) Please refer to NSUARB IR-4 Attachment 1.

(b) Please refer to the table below.

Year	General Rate Application	Base Cost of Fuel	FAM AA/BA	DSM
2010			YES	
2011		YES	YES	YES
2012	YES		YES	YES
2013	YES		YES	YES
2014	YES		YES	YES
2015			YES	YES
2016		YES		
2017		YES		
2018		YES		
2019		YES		

NON-CONFIDENTIAL

Request IR-4:

Reference: NS Power Evidence, 2020-2022 DSM Plan, page 8, lines 21-22.

NS Power states that “the renewable energy sources over the Application window are forecast to provide more economic energy”

Please provide the following information over the Application window as well as for all years of operation for those renewable energy sources that became operational prior to 2020:

(a) A detailed listing of the renewable energy sources over the Application window.

(b) The year that each of the renewable energy sources became operational.

(c) The levelized cost of energy for each of the renewable energy sources (i.e. utility cost \$/MWh).

(d) The size (MW) of each of the renewable energy sources.

(e) Identify whether each of the renewable energy sources is ‘committed’ or ‘projected’.

(f) The forecast annual energy (MWh) by year and firm capacity value for each of the renewable energy sources.

Response IR-4:

(a-f) Please refer to NSUARB IR-1 and NSUARB IR-12. The full sentence, partially referenced by E1, refers not to specific itemized renewable generators but rather to non-emitting opportunity energy that will be available to NS Power on the margin compared

NON-CONFIDENTIAL

1 to the more expensive incremental DSM that E1 proposes in its Preferred Plan. In
2 comparison, NS Power currently forecasts opportunity energy to be available on the
3 margin at market prices of approximately \$50/MWh compared to the \$64/MWh cost of
4 incremental DSM from E1's Preferred Plan.

NON-CONFIDENTIAL

1 **Request IR-5:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 17, lines 14-16.**

4
5 **NS Power states that “E1 could follow the trend in other jurisdictions and wait to allow the**
6 **benefit of the more expensive DSM measures to become more effective, much the way**
7 **lighting measures have decreased over the past ten years.**

8
9 **(a) Please list other jurisdictions that are withholding DSM program support to allow**
10 **more expensive commercially-available measures to become more cost-effective?**

11
12 **(b) Which measures or program activities are they withholding support using this**
13 **rationale?**

14
15 **Response IR-5:**

16
17 **(a-b) Please refer to CA IR-10.**

NON-CONFIDENTIAL

Request IR-6:

Reference: NS Power Evidence, 2020-2022 DSM Plan, page 17, lines 16-20.

(a) Please list those measures included in EfficiencyOne's 2020-2022 DSM Resource Plan that NS Power expects to experience a reduction in cost by 50% or more in the next three years.

(b) Please provide source(s).

Response IR-6:

NS Power expects that, much like efficient lighting is forecast to decrease by 50 percent by 2020, other products in the efficiency portfolio could experience similar cost reductions as technology improves. The following article from the US National Renewable Energy Laboratory highlights the consistent decrease in solar costs from 2010 to 2018.

<https://www.nrel.gov/news/program/2018/costs-continue-to-decline-for-residential-and-commercial-photovoltaics-in-2018.html>

NS Power has not conducted research into all of the products contained in E1's Preferred Plan, however industry trends indicate that, similar to the lighting and solar trends, there should be price declines across a suite of other efficient products.

NON-CONFIDENTIAL

Request IR-7:

Reference: NS Power Evidence, 2020-2022 DSM Plan, page 20, lines 10-11.

(a) Please provide Figure 6 utilizing kW of installed capacity on the vertical axis and extending the horizontal axis through to 2022.

(b) Please provide the source for the installed/projected capacity for 2019-2022.

(c) Please identify the amount of this installed/projected capacity that is firm capacity.

Response IR-7:

(a) Figure 6 in NS Power's evidence included all net metering installations. The same graph is reproduced below but represents only residential solar installations.

The same graph representing residential capacity by year from 2000 to 2022 is set out below.

NON-CONFIDENTIAL

(b) Forecast installed net metering solar capacity for the residential sector is taken from the following report (the scenario used is “Maintain Current Market Activity”):

Nova Scotia Residential Solar Market Outlook and Labour Force Study Final Report - April 2019 prepared by Dunskey Energy Consulting.

https://www.cansia.ca/uploads/7/2/5/1/72513707/cansia_nova_scotia_residential_solar_market_outlook_and_labor_force_study_-_final_report_2019-04-09_.pdf

(c) None is firm capacity.

NON-CONFIDENTIAL

1 **Request IR-8:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 21, lines 5-10.**

4
5 **NS Power suggests that the IRP levels are not appropriate to be used in establishing DSM**
6 **plan energy and investment levels. What form of planning model does NS Power consider**
7 **appropriate to be used when assessing short, medium and long-term DSM planning levels**
8 **for the utility?**

9
10 **Response IR-8:**

11
12 NS Power believes an IRP process informs long-term strategic direction and provides context on
13 the impact of DSM levels on resource plans as load modifier inputs over the long term and
14 provides the basis for the calculation of avoided costs. However, it does not take into account
15 other factors that are important in setting the appropriate level of DSM, such as affordability and
16 system requirements in the short term. The DSM proceeding is the appropriate venue to assess
17 and establish the appropriate levels of DSM for the utility, taking into consideration the current
18 outlook and utility requirements as well as affordability.

NON-CONFIDENTIAL

Request IR-9:

Reference: NS Power Evidence, 2020-2022 DSM Plan, page 22, lines 7-8.

Please provide a re-stated Figure 7 that identifies the following for each of the nine customer proposed DER projects:

(a) Year project will be operational.

(b) Amount of firm generation resulting in available capacity to the electricity utility system.

Response IR-9:

(a) The Company does not have the specific dates when each of the proposed projects would be operational. Details discussed to date have been around conceptual design details. NS Power expects that the majority of these projects will be operational within the next 5 years.

(b) Please see the table below for firm capacity of the proposed projects, assuming that all of the associated projects will be built.

Generation Type	Firm capacity (MW)
CHP	11.75
CHP/DE	11
CHP/DE & Solar/Wind	9.52
CHP/Solar/Wind/Storage	0
District Energy (DE) Plant	12.75
Solar	0
Solar & Wind	0.85
Wind	0.34

NON-CONFIDENTIAL

Request IR-10:

Reference: NS Power Evidence, 2020-2022 DSM Plan, page 23, lines 2-4.

(a) Please list the data fields that are tracked for each heat pump installed through NS Power's program.

(b) Please provide quantities for all heat pumps installed through the NS Power program for the years 2012 to 2018, broken down by the type of heating system replaced (electric or non-electric), and include the installed heat pump model.

(c) Please provide NS Power's estimate of the aggregate annual electrical energy and system peak demand impact of the NS Power heat pump program (over 2012 to 2018), including installations that replaced electric and non-electric heating systems.

Response IR-10:

(a) The following fields are tracked for each heat pump installed through NS Power's program:

- Customer name
- Approval status
- NS Power account number
- Approval number
- Application processed by [Name]
- Financing amount requested
- Amount financed
- Date application processed
- Date lease processed

2020-2022 Demand Side Management (DSM) Resource Plan (NSUARB M09096)
NSPI Responses to EfficiencyOne Information Requests

NON-CONFIDENTIAL

- Contractor
- Equipment financed
- Previous heating fuel (beginning 2017)
- Additional information
- Lease processed by [Name]
- Equifax score
- ERS score
- BNI score
- Bankruptcy
- CIS credit rating
- Homeowner/property owner
- Approved up to
- Customer email
- Install cost
- Outstanding Balance

(b) Please refer to Q4 2017 Regulated Financial Statements (M08631) – NSUARB IR-47 Attachment 1 and Attachment 2 for quantities installed and previous heat source assumptions. NS Power does not track installed heat pump models. 2018 information is not yet available.

(c) Please refer to Q4 2017 Regulated Financial Statements(M08631) – NSUARB IR-47 Attachment 1 and Attachment 2 for energy impact of these installed heat pumps. 2018 information is not yet available.

NON-CONFIDENTIAL

1 **Request IR-11:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 32, lines 4-7.**

4
5 **Please provide the model analysis (working excel model with formulas intact) that was used**
6 **to calculate the percent rate change referenced here (+0.5 percent, +2.2 percent, +3**
7 **percent).**

8
9 Response IR-11:

10
11 Please refer to Synapse IR-17.

NON-CONFIDENTIAL

1 **Request IR-12:**

2
3 **Reference: NS Power Evidence, 2020-2022 DSM Plan, page 36, lines 17-19.**

4
5 **Please provide the quantification and analysis for the short-term rate impacts referenced**
6 **here.**

7
8 Response IR-12:

9
10 Please refer to Synapse IR-23 Attachment 1.

11
12 The rate and customer bill impact effects in the years 2019-2024 shown in the “Inter-class
13 Outputs NSP” tab can be characterized as falling into a short-term category.

NON-CONFIDENTIAL

1 **Request IR-13:**

2
3 **Reference: Appendix A, Evidence of Richard L. Levitan, Levitan & Associates, Inc., page**
4 **24 of 103, lines 6-21.**

5
6 **Please provide the unitized cost of energy savings for the full 2020-2022 Preferred Plan.**
7 **Please provide the percent increase in the unitized cost of energy savings from the 2019**
8 **Plan to the 2020-2022 Preferred Plan.**

9
10 Response IR-13:

11
12 **From Richard Levitan, Levitan & Associates, Inc.:**

13
14 The referenced section of Appendix A, Evidence of Richard L. Levitan, Levitan & Associates,
15 Inc. was prepared to show the first-year energy savings unit cost beyond the investment in the
16 2019 DSM Plan.

17
18 In preparing my evidence, I did not calculate the first year unitized cost of energy savings for the
19 full 2020-2022 Preferred Plan and the percent increase in the unitized cost of energy savings
20 from the 2019 Plan to the 2020-2022 Preferred Plan, but believe they can be calculated using the
21 values in Table 2 of Appendix A to EfficiencyOne's Application and EfficiencyOne's peak
22 demand reduction investments.

NON-CONFIDENTIAL

1 **Request IR-14:**
