

NON-CONFIDENTIAL

Undertaking U-22:

To provide information on why the two LM6000 projects, 191332 Life Extension and 1914433 Engine Refurbishment, were not included in the list in the response to Board IR-92.

Response U-22:

The two projects in question are C0068655 LM6000 191-332 Life Extension and C0073491 LM6000 191-443 Engine Replacement. NS Power interpreted the information request as related only to capital projects not yet approved that were included in the GRA application, specifically in the 2026 and 2027 test period.

C0068655 was not included in the response to NSEB IR-92 as the project was forecast to be completed in 2025 and not within the GRA test period.

C0073491 was not included in response to NSEB IR-92 as this project was not explicitly broken out within the GRA forecast and would have been included within the LM6000 portfolio specifically related to TUC Unit 4. At the time the GRA capital forecast was developed, the full scope and timing of this project was not fully calibrated. For this reason, it was not included as a specific project.
