Dan Roscoe P.Eng.
President, Renewall Energy Inc.
1625 Grafton Street
Suite 1500
Halifax NS B3J 0E8

Dear Mr. Roscoe:

M12681- Renewall Energy Inc – Compliance Reporting

The Nova Scotia Energy Board acknowledges receipt of Renewall Energy Inc's Compliance Reporting for the 2025 period on January 21, 2026. Board member, Stephen T. McGrath, K.C., Chair, has reviewed your filing.

During the reporting period, Renewall did not generate or acquire any renewable low-impact electricity and did not provide service to any customers.

While the Board appreciates the information, it notes that compliance periods under Renewall's licence and s. 2(2) of the *Board Electricity Retailers Regulations (Nova Scotia)* run in two-year cycles (except for the first period after the granting of the licence). Renewall's compliance periods from the grant of its licence to date have been:

- October 27, 2021, to December 31, 2022;
- January 1, 2023, to December 31, 2024; and
- January 1, 2025, to December 31, 2026

As such, Renewall's next compliance report will be due by January 31, 2027, and will cover the period from January 1, 2025, to December 31, 2026.

In addition, there is a separate requirement to file a compliance plan, no later than 60 days before the start of each compliance period, which sets out forecasts for the upcoming compliance period, along with contracts and certifications relating to the renewable resources included in the forecast. **Renewall's compliance plan for the compliance period from January 1, 2027, to December 31, 2028, is due no later than Friday, October 30, 2026.**

In Renewall's request for an extension of the date it is required to begin selling renewable low-impact electricity under its licence in September 2025, the company advised that first generation from its first contracted generator, the Mersey River Wind Project, in October 2026. A forecast provided at that time showed generation beginning in October and sales to customers beginning in November. It projected a small, but net surplus of sales of renewable electricity to its customers by the end of the current compliance period. However, the information did not include anything for line losses.

The Board directs Renewall to file the following before any generation or sales occur in 2026:

a) **an updated forecast to the end of the current compliance period (December 31, 2026) showing that its total purchases or generation of renewable low-impact electricity at the point of interconnection that is not sold behind-the-meter equals or exceeds its total sales of renewable low-impact electricity plus transmission and distribution losses;**

b) **fully executed and up to date contracts (including any amendments) securing the supply of renewable low-impact electricity from all contracted facilities included as generation resources in the forecast; and**

c) **proof that all generation facilities included in the forecast have been issued an electricity standard approval under s. 14 of the *Renewable Electricity Regulations*.**

Finally, the Board notes that there is a requirement for annual reporting under s. 22 of the regulations (and the annual filing fee under s. 8); however, the information to be included in such a report is different than what is required in a compliance report. The Board confirms that Renewall is up to date with its annual filing requirements and its next annual report is **due no earlier than August 28, 2026, and no later than September 25, 2026**.

Yours very truly,

Crystal Henwood

Crystal Henwood
Clerk of the Board
