Response to April 1st E-mail from Don Farmer DRO

Dec → Feb 2026 meter read \$1258.41

Meter reader must have made note of a coil of wire hanging on side corner of house. This has now been removed by electricians, was not wired into electrical panel in basement. "Theft of power" thru' an outlet on south end of house not capable of servicing an electric car, and since reading I have nailed a 2x6 over the outlet. The wiring checked & no ground faults.

The weather in Jan & Feb may have been a factor. The next person who reads the meter can take notice of the wire removed & outlet covered.

After the meter reads and bills are reconciled I should see a levelling out of future bills.

Both heat pumps are off at the breaker switch.

If the breach caused some meters to fluctuate, as some have those meters may not measure power usage properly in the days ahead.

The checking of my meter was scheduled for Apr 8th I waited all day. No one showed up for the check!
